

## SQL Server 2008

Power and simplicity for your VISUAL DB

### The Business Issue

Perhaps your business has outgrown SQLBase, or you want to move to the latest version of Visual (which no longer runs on SQLbase). Are you running an older version of SQL Server and need to repurchase the latest version? You now have more choices than ever....

### The Solution

Microsoft SQL Server is an extremely attractive database platform. Its low cost and ease of use makes it the choice of thousands of Visual customers. And now, the decision has become that much easier- purchase SQL Server through Infor and not only will you get the most competitive pricing available, but Infor will provide SQL Server database support, and future versions as they become available. This saves you the hassle of calling different providers when you need help, and allows you to take full advantage of new technology as it becomes available.

### The Result

The reliability and solid performance of Visual and SQL Server go hand in hand. Entrust your business critical data to the solution that will provide you peace of mind, availability, and security so that you can focus on what is most important to your business.

Works with all versions of VISUAL 6.5.4 SP2 and above.
